Bibliography of Village and Town Studies of Tamil Nadu¹

K. Nagaraj, Rukmani

In the compilation of a bibliography of village and town studies of Tamil Nadu our original plan was to attempt a thorough stock taking exercise of the studies on Tamil Nadu and also annotate and critically review the identified studies. We had proposed to do the following:

1. To identify all the village and town studies carried out in Tamil Nadu;
2. To procure copies of these studies for a central library;
3. To prepare a bibliography along the lines of the bibliography prepared by the Institute of Development Studies, Sussex that provides a bibliographical statement, a verbal annotation and a coded statement for each identified study.
4. To attempt a comprehensive and critical review of the identified studies.

We have deviated from this plan as we identified a much larger number of studies than we had anticipated. Moreover, a very large proportion of the studies we identified is Ph.D. or M.Phil. theses and we faced enormous problems in getting them photocopied. Therefore we have concentrated only in compiling a bibliography of village and town studies and could not attempt to annotate and review all the studies. However we had attempted verbal annotations for 31 studies. These annotations along with a note to the coded statement, as given by the IDS bibliography, are provided in Annexure-1. In Annexure-2, we provide an annotated index to the 31 Census villages, which was prepared by (late) Prof. S. Guhan of the Madras Institute of Development Studies.

In the compilation of the bibliography we have depended on the following sources to identify the studies:

1. Social Science Departments of Universities, Autonomous Colleges and Research centers in Tamil Nadu;
2. The library of Madras Institute of Development Studies;
3. The Bibliography on Village Studies prepared by the Institute of Development Studies, Sussex in 1976; and
4. Village Monograph series of the Census of 1961.

ACKNOWLEDGEMENTS: We gratefully acknowledge the funding received from Kerala Research Programme on Local Level Development, Centre for Development Studies, Thiruvananthapuram, for the compilation of this Bibliography. We are grateful to Mr S.Paul Pandian for his meticulous efforts in collecting the material. We would also like to thank Ms R.Hemalatha and Mr R. DharumaPerumal for the help they have extended.

K. Nagaraj is Professor at Madras Institute of Development Studies, Chennai. R. Rukmani works with M.S. Swaminathan Research Foundation, Chennai.

The bibliography is, however, not exhaustive as it includes only those studies that are available in the above mentioned sources and work on Tamil Nadu which are not available in any one of our sources gets excluded from the bibliography. A distinctive feature of this bibliography is the inclusion of the vast body of work in the form of M.Phil and Ph.D theses.

In compiling this bibliography, a village study is identified as one that involves a primary survey in a village, irrespective of the aspect covered. Working with this definition we have identified and listed a total number of 678 studies as village studies. Of this a major proportion is accounted for by Ph.D. and M.Phil theses: 70 Ph.D. and 498 M.Phil theses have been identified. In addition to the Ph.D. and M.Phil theses, our bibliography comprises of a total number of 79 studies (identified from the library of Madras Institute of Development Studies and those that are listed in the IDS bibliography) and 31 Census monographs.

For the studies we have identified and collected some basic details such as the title and author of the study, district covered by the study, and year of submission or publication of the study. We have classified the studies into broad subject wise groups, relying purely on their titles. The 678 village studies have been grouped into 13 broad groups. Table 1 indicates the subject and region-wise categorisation of the 678 studies identified. While classifying the studies subject-wise we have not resorted to any cross-classification. That is, each title is entered in only one category.

From Table 1 we find that nearly half the village studies- 334 out of 678 studies - deal with issues relating to the primary sector. Within this a large number of studies - 17 percent deal with aspects relating to production, yield and technology in agriculture; 16 percent deal with allied activities - fishing, forestry, sericulture, dairy etc.; about 14 percent are crop studies; 13 percent on agricultural labourers and 9 percent on caste, agrarian structure and agrarian transformation. Next in importance to the primary sector are studies that deal with government interventional programmes - these account for 60 studies or 9 percent of all village studies. General village studies, which look at all aspects of the village economy, like the village monographs of the Census, account for 51 studies. While a large number of other important issues have been studied, the subject wise classification also reveals inadequate attention received by certain areas such as, rural industries, social sectors - health, education and housing, demography and fertility, *panchayats*, gender issues and employment dimensions of rural labour. Just 43 studies - 6 percent have dealt with rural industrialisation; 22 studies - 3 percent on social sectors; 34 studies 5 percent on demography and fertility and 8 studies, just 1 percent, on aspects relating to the *panchayats*. Among studies that pertain to agriculture a majority focus on technical aspects of production and only few studies deal with issues relating to the agrarian structure.

Classification of village studies by region covered do not indicate any great imbalance across regions in terms of coverage though the southern districts have been studied more extensively than the rest. The least studied region is the Coimbatore region followed by Chengalpattu region.

In compiling a bibliography of town studies, a town study is identified as one that involves a primary survey in a town, irrespective of the aspect covered. Using this definition we have identified a total number of 583 town studies. A very large proportion of these studies, nearly 96 per cent are Ph.D. and M.Phil theses. 496 M.Phil theses and 65 Ph.D. theses have been identified as town studies. Four Census studies and 17 Studies that were identified in the library of MIDS account for the rest. We have classified the town studies (Table 2) and we find that one fourth of all town studies - 150 studies - deal with aspects relating to the secondary sector. Within this category, studies dealing with specific industries are quite prominent. There is also considerable work - 53 studies - on labour within the secondary sector. Next in importance to studies on secondary sector, are studies relating to the tertiary sector - 74 studies, that is 13 percent of all town studies deal with the tertiary sector. Within this a large number deal with those employed in this sector either in the organised sector or the unorganised, informal sector. A large number of town studies - 13 percent - also deal with attitudinal or behavioural aspects of individuals or households. About one tenth of town studies are concerned with the social sector - education, health and housing and slightly less than 10 percent of studies on aspects relating to population and demography. While a whole range of issues are covered by town studies there are certainly some prominent gaps: there are just three studies on the employment dimensions in the urban context; infrastructure and water supply are dealt with by only 10 studies; government interventional programmes which received a great deal of attention in the rural context has hardly received any attention in the urban context; a major gap is also with regard to research on urban poverty, migration, social sector development, caste issues, etc. which have received much less attention compared to the gravity of these problems in urban areas.

As regards regional coverage it is interesting to note that a large number of studies cover the northern tract of Tamil Nadu comprising of the Chengalpattu and Coimbatore regions, which is more urbanised than the rest of Tamil Nadu, while the pattern is the exact reverse in the case of village studies.

The bibliography of village and town studies is provided in Appendix 1 and 2 respectively.

ANNEXURE-1

Annotations for 31 village studies together with a note to the coded statement are provided herewith.

(i) Caste, Agrarian Structure, and Agrarian Transformation:

1. **Alexander, K. C.** (1975): *Agrarian Tension in Thanjavur*, National Institute of Community Development, Hyderabad.

This study attempts to understand the phenomenon of agrarian unrest in Thanjavur district by conducting a survey in few villages in two taluks Mannargudi and Mayavaram where agrarian unrest was high and low respectively. The study notes that the basic difference between the two areas is in terms of influence of the Communist Party in these areas - it was high in Mannargudi and weak in Mayavaram.

2. **Arputharaj, C. and Vallinayagam, S.S.** (1980): *Changes in Land Ownership Pattern in a Decade-Tamil Nadu*, Research Study No.69, *Agricultural Economics Research Centre*, University of Madras, Madras (Mimeo).

The main focus of this study is to understand the factors underlying the changes in land ownership pattern over a decade 1970-'71 to 1979-'80. A sample survey has been conducted in two villages in Coimbatore district. A sample of 90 holdings has been chosen for this purpose. The study notes that there has been a decline in number of holdings as well as area owned by large farmers, while small and medium farmers have gained. A major finding of the study is that in a majority of cases (52%), partition of lands was responsible for the decrease in area and that partitions were not made with any motive to circumvent legislation. Sale of farmland was another major factor that led to a decline in area. By and large sale of land was resorted to repay debts or to meet social obligations. Data is provided only for the entire sample and not for individual villages.

3. **Athreya, V.B. et al** (1990): *Barriers Broken: Production Relations and Agrarian Change in Tamil Nadu*, Sage Publications, New Delhi.

This study analyses and brings out the contrasts in production relations and agrarian change across two distinct ecotypes. Three villages in a wet area and three villages in a dry area in Tiruchirapalli district are chosen for the study. A sample survey of the agrarian population of these villages was conducted in the year 1979-'80. The study argues that production relations cannot on their own explain processes of agrarian change - factors relating to ecology, as also the state policies would have a strategic role to play.

4. **Gough, Kathleen** (1981): *Rural Society in South East India*, Cambridge University Press, Cambridge and

5. **Gough, Kathleen** (1989): *Rural Change in Southeast India, 1950s to 1980s*, Oxford University Press, Delhi.

These two books deal with the economic and political change in Thanjavur district. The books are based on fieldwork conducted in two villages during 1951 to 1953 and again from February to October 1976. In this important and detailed work on Thanjavur, Gough argues that capitalist development in agriculture over the period has not brought prosperity to the majority of the people.

6. **Hara, Tadatiko** (1981): *Studies in Socio-cultural change in rural villages in Tiruchirapalli district*; No. 2, Institute for the study of Languages and Cultures of Asia and Africa, Tokyo (Mimeo)

This is a socio-economic study of two villages - Esanakorai and Peruvalanallur situated in different agro-economic zones of Tiruchirapalli district. The major objective of the study is to understand the changes witnessed by the villages over time. The main emphasis is on studying changes in land tenure, land holdings across different caste groups as also the settlement pattern of the villages. Data sources for the study are historical as well as contemporary: resettlement registers of the colonial period, information from descriptions in temples, government publications of the post-colonial period and the data generated from the field study are used. Study throws some light on migration from these villages over a long period of time.

7. **Subbiah, S**, et al (1981): *Studies in socio-cultural change in rural villages in Tiruchirapalli district, India*, No.4, Institute for the Study of Languages and Cultures of Asia and Africa, Tokyo (Mimeo).

This study analyses the structural and spatial pattern of the most important resource base viz. land in a dry village, Mahizambadi. The study documents the highly skewed distribution of resources. Study gives detailed information on caste structure, land ownership, land transactions, irrigation, livestock as well as some salient features of the population as regards literacy and demography.

8. **Sundari, T.K.** (1991): *Caste and the Agrarian Structure: A study of Chingleput District, Tamil Nadu, South India*, Oxford and IBH Publishing Co.Pvt. Ltd. New Delhi and Centre for Development Studies, Thiruvananthapuram.

The main concern of the study has been to understand the relationship between caste and agrarian structure, as it exists today and the manner in which this has changed over time. The study captures the interaction between caste, land-labour relations and material conditions of agricultural production in Chingleput district by a survey of villages combined with archival work. The study notes that caste is still very much a factor to reckon with and it enters work arrangements between landowners, tenants, and wage labourers. A major finding of the study is that caste class configuration of a village become significant in defining the balance of forces between landowners and wageworkers. Given that labour market is divided on caste lines the study argues that it may not be feasible to bring all wageworkers as one interest group.

9. **Naidu, V. Chandrasekara** (1988): *Some Aspects of Agro-Economic Transformation in Tamil Nadu - A Case Study of Enathimelpakkam Village*, Working Paper No.86 Madras Institute of Development Studies, Madras.

The main objective of the study has been to capture the processes responsible for the prevalence of poverty in the village. The study notes that despite the adoption of modern technology in agriculture and the inflow of huge amounts of public assistance over a period of time there is mass poverty in the village. The study concludes that the high cost

of cultivation that has to be borne by marginal and small farmers, reduction in employment opportunities, high rate of inflation, high level of landlessness of households are the major factors that explain high levels of poverty in the village.

10. **Naidu V. Chandrasekara** (1995): *Enathimelpakkam Revisited 1993-'94*, Working paper No.127, Madras Institute of Development Studies, Madras.

This study is on the basis of a survey conducted in 1993-'94 and attempts to capture the changes experienced by the village since the first survey, 1985-'86. The study notes that there has been a shift in the concentration of absolute poverty from agricultural to non-agricultural households in the village.

11. **Naidu, V. Chandrasekara** (1992): *Verkadu - Study of A Backward Agricultural Village In Tamil Nadu*, Working Paper No.109, Madras Institute of Development Studies, Madras.

12. **Naidu, V. Chandrasekara** (1995): *Verkadu: A Resurvey*, Working paper No.128, Madras Institute of Development Studies, Madras.

This resurvey attempts to record the changes experienced over the period 1985-'86 and 1993-'94 in Verkadu. A major development in the village has been with regard to its workforce - about 60 percent of the workforce now depends on non-agricultural employment available outside the village. The study notes that the traditional pattern of agriculture practised in Verkadu could not absorb the growing labour force. This led to a very high level of poverty in the village. Lack of adequate employment opportunities within the village resulted in large sections of the village population taking up non-agricultural employment outside the village.

ii. Rural Credit:

1. Backstrand, Goran and Anders Turesson, (1983): *Economic and Social Aspects of Agriculture in India - A Case study of Chinnathadagam Village*, Royal Institute of Technology, Stockholm.

The main aim of the study is to understand the socio-economic environment of a village and within this the environment in which agriculture is practised. The study notes the sharp inequality in land distribution in the village. The study also records the higher level of production, productivity and income of well-irrigated lands compared to irrigated lands. Given this, the inequality in wealth is perpetuated when marginal farmers are excluded from institutional finance especially for digging a well and for purchasing a pump set, comment the authors. The study is not very detailed and the survey of 39 households is done over a period of two months.

2. **Heyer, Judith** (1981): *Attempting to Reach the Rural Poor'. The Small Farmer*

Development Agency in Varandur Village, Working Paper No.22 Madras Institute of Development Studies, Madras.

The main focus of the study was to see the impact of Small Farmer Development Agency in Coimbatore Region in 1980. SFDA operates through existing credit institutions and is responsible for making subsidised credit available to small farmers, marginal farmers and agricultural labourers to make them economically viable. There are some eligibility criteria, which have to be fulfilled by the households to become a beneficiary under this scheme. The study discusses the problems with the criteria and the functioning of SFDA.

3. **Rogaly B.N.** (1985): *A Study of Commission Agents in Dindigul with special reference to producer Credit*, Research Report Number 5, Credit for Rural Development in Southern Tamil Nadu. University of Reading, U.K.

As the title suggests, the study attempts to understand the informal credit system by a survey of *Mandi* owners in Dindigul and farmers in two villages near Dindigul and officials in regulated market. The study makes some interesting observation on the relationship between *Mandi* owners and farmers.

4. **Swaminathan, Madhura** (1986): *'Rural Credit in Two Villages in Madurai District'*, Final Research Report No.1 Credit for Rural Development in Southern Tamil Nadu, University of Reading, UK.

-1	---	---	2-	1-	--	---	---	-1 1	-1

This is a study of two villages Konur and Gokilapuram located in contrasting agro-economic zones of Madurai district. The objective of the study is to understand the functioning of the credit market - formal and informal- at the village level as also to see the impact of IRDP on its beneficiaries. A detailed survey of households is conducted in both the villages

and information on credit, indebtedness and the operation and impact of IRDP is provided. An important observation of the study as regards IRDP is that plans and schemes that are centrally charted out are not modified either to meet the needs of specific regions or to meet the requirements of different sections of population.

5. **Wellard, Kate** (1985): *A Study of the Madurai Agricultural Development Branch of the State Bank of India (with special reference to crop loans for paddy cultivation)* Research Report No. 9. Credit for Rural Development in Southern Tamil Nadu, University of Reading, U.K.

This study aims to understand the functioning of ADB by studying a sample of farmers in one village - Mathur. The study gives information, for the sample, on the size holding of farmers who are given loans, their cost of cultivation, income from agriculture and other activities, and loan returns. No other information on the village is available. There are some details on the performance of ADB in Madurai district.

iii. Primary Sector

1. **Blase, F.W.** (1982): *Coastal Village Development in Four Fishing Communities of Adiramapattinam, Tamil Nadu*. Working Paper - 19, Bay of Bengal Programme, Madras.

The main interest of this study has been to identify a 'target group' who can be assisted by the BOBP in such a manner as to raise the income and standard of living of the group. Four fishing communities of Adiramapattinam were surveyed. The needs of the fishermen were identified as credit, education, and drinking water. BOBP has responded to their needs by extending small loans, arranging for non-formal classes and water taps.

2. **Drewes, Edeltraud** (1982): *Three Fishing Villages in Tamil Nadu*, Working Paper 14, Bay of Bengal Programme, Madras.

The objective of the study has been to understand the socio-economic situation of three fishing villages near Chennai. Within this the emphasis is on understanding the economic role and status of women. All the women - 300 in number - were interviewed in these villages in March 1981. The main finding of the study is that in all the three villages the landings of fish are too small for fish merchants to enter. This has given room for the women of the village to take up fish marketing. This role played by the women has enhanced their status. The study also points out that given the small scale of fishing activity in these villages, unless additional fresh resources are identified it is difficult to conceive of programmes that would bring about overall improvement.

iv. Demography and Fertility:

1. **Aiyappan, A. and Mahadevan, K** (1988): *Population and Social Change in an Indian Village*, Mittal Publications, Delhi.

Coded Statement:

This study is a resurvey of a satellite town - Mangadu of Chennai city. The original survey was conducted in 1956 while the resurvey was conducted in 1988. The main focus of the resurvey has been to document the changes with regard to demography and health. Within this there has been an emphasis as regards adoption of family planning techniques. The study provides lot of useful data on demographic aspects for the scheduled castes as well as caste Hindu population of the village. But there is very little analytical exercise and hence the reader is completely in the dark about factors underlying the noted trends. However this study shall provide an excellent basis for a resurvey.

2. **Pillai, Mahadevan and Namboothiri D. Narayanan** (1972): *Caste, Status and Fertility in a Rural Area of Tamil Nadu*, Bulletin vol. No.1_Gandhigram Institute of Rural Health and Family Planning, Gandhigram.

The study attempts to understand the relationship between socio-economic status and fertility and see how this relationship is mediated through the system of caste. A survey was conducted in 28 villages, in Madurai district, and the respondents were drawn from different caste groups. The study concludes that major caste groups show persistent and marked differences in family building patterns. The study notes that caste has become a sub-culture within the society and the fertility behaviour of an individual is more in consonance with the norm of his caste.

v. General Village Studies

1. **Athreya, V.B.** (1984): *Vadamalaipuram: A Resurvey*, Working Paper No.50. Madras Institute of Development Studies, Madras.

Coded Statement:

Vadamalaipuram has been surveyed in the years 1916, 1936 and 1958. The present survey was conducted in the year 1983 with the main purpose of studying the nature of transformation witnessed by the village economy. The study's finding is that while the economy of the village has experienced some major structural changes, viz. modernisation of agriculture, rise of manufacturing activity, increasing concentration of landholding - the standard of living of the mass of the population has not improved.

2. **Athreya V.B.** (1985): *Gangaikondan 1916-1984: Change and Stability*, Working Paper No.56. Madras Institute of Development Studies, Madras.

Gangaikondan has been surveyed thrice earlier in 1916, 1934 and 1958-60. The present study is a result of a survey conducted during 1983-84 in the village. The focus of the study has been to analyse the changes that have been experienced by the village economy over time as also to provide a picture of the village economy as it is today. The study concludes that given the inequality in the distribution of assets, the benefits of the process of development experienced by the village economy have not been widely distributed. Important changes witnessed by the economy are: area under tenancy has declined sharply; yield of paddy - the most important crop - has increased by about 50% over the last two decades; a development of the livestock economy; and an increase in non agricultural employment.

Palakurichi was first surveyed in the year 1917 and then in 1936-'37. The present study is on the basis of a survey conducted in the year 1983. The main purpose of the study is to analyse growth and change in Palakuruchi. The study notes that while the village always reported high concentration in land ownership this feature became entrenched and poverty and inequality remained intact overtime. The main changes experienced by the village economy are: increase in non-farm employment, unionisation of agricultural labourers, introduction of second cropping, and introduction of tractors.

Dusi, one of the five villages studied by Gilbert Slater, was first surveyed in the year 1916-'17 and was resurveyed subsequently in the years 1937 and 1961. The present study was conducted during 1983-'84 and records the emergence of weaving since about the early 1960s as a major aspect of the transformation that Dusi has undergone. More than half the households are involved in weaving. While the study notes a remarkable improvement in literacy, housing, electricity, water supply, health and communications overtime, there is no remarkable reduction in the levels of poverty.

The village Iruvelpattu has been surveyed in the years 1916,1936-'37 and 1981-'82. The focus of the present study is to analyse the changes experienced by the economy of the village since 1916. The main finding of the study is that the pattern of poverty has remained more or less same in the village in spite of additional employment created by widespread use of modern techniques in agriculture.

1. **Agricultural Economics Research Centre (1984): *Problems in Growth of Oil Seeds: A Study of Groundnut in Tamil Nadu.*** University of Madras, Madras.

The main objective of the study is to understand the problems in the growth of groundnut production in Tamil Nadu. 200 households in eight villages lying in Salem and South Arcot districts have been surveyed in the year 1981-82. The study shows that a major problem encountered by the groundnut farmers is inadequate availability of seeds. Use of old seeds result in poor yield of the crop. Another major problem encountered by the groundnut farmers is lack of any assured price for their produce.

--	---	1--	--	---	--	---	---	---	--

The objective of the study has been to identify the socio-economic characteristics of rural labour force and to investigate the pattern of employment and unemployment. Four villages in Coimbatore taluk are randomly chosen and 100 households are surveyed in each. The main finding of the study is that the extent of unemployment got minimised substantially in villages having fairly stable irrigation facilities or those that adopted labour intensive crop and successive crop rotation complemented by dairying or those that possessed industrial centres.

3. **Arputharaj, C. and R. Rajagopalan, (1978):** *Impact of High yielding varieties Programme in South Arcot District, Tamil Nadu*, Research Study No.58, Agricultural Economics Research Centre, University of Madras, Madras (mimeo).

The study on impact of High Yielding Varieties programme in South Arcot district is on the basis of a sample study of 100 farmers selected from 4 villages in South Arcot district. The survey has been conducted in the year 1975-76. The report provides information only for the sample as a whole and not for individual villages. The study finds that all cultivators irrespective of the size of holding have adopted high yielding varieties and that there has been significant increase in the production and yield of paddy. The study further notes that cultivation of new varieties has led to an improvement in incomes and standard of living of the farmers. These findings are corroborated by another study conducted by the author using similar methodology, in Chingleput district. The reference to this study is as follows:

4. **Arputharaj, C. and Rupchand A.J. (1979):** *Impact of High Yielding Varieties Programme in Chingleput District*, Research Study No.59, Agricultural Economics Research Centre, University of Madras, Madras (mimeo).

5. **Asokan, S. (1992):** *Agrarian Change and Water Management in Kumbapettai Village, Thanjavur District*, Irrigation Water Management, Anna University, Madras (Mimeo).

The study analyses agrarian change and water management in the Kumbapettai, a village earlier studied by Kathleen Gough, in the context of inter-state water dispute between Karnataka and Tamil Nadu. The study finds that the absence of an assured flow of water in the river Kudamuruti has necessitated a shift to single cropping from the earlier practice of double cropping; groundwater is being tapped on a large scale as an additional and more reliable water source; there has been a change in the cropping pattern, favouring sugarcane over paddy.

As far as possible, the BOXES have been arranged in homogeneous, subject groups, as follows:

- ‘ORIENT’ to ‘MAPS’ relate to the orientation of the research and the fieldwork methods used.
- ‘VL POP’ to ‘COMM’ comprise information on the economic geography of the village.
- ‘RNFL’ to ‘SOIL’ describe the natural environment of the village.
- ‘M-L RT’ to ‘IRRG 2’ relate to type of agriculture practiced.
- ‘AG INP’ to ‘LV STD’ contain data presented in forms which derive directly from the conventional economists’ approach to the analysis of the village economy.
- ‘DEMOG’ to ‘HSEHLD’ include demographic information.
- ‘OCCPS’ to ‘LABOUR’ cover information on labour use and employment.
- ‘SCHOOL’ AND ‘EDU’ relate to educational variables.
- ‘MEDIC’ TO ‘FOOD’ contains data on health and nutrition.
- ‘LAN RL’ TO ‘ATTDS’ relate broadly to ethnographic concepts.
- ‘PLTCS’ TO ‘COOP 2’ are miscellaneous categories.

Source: More, Mick, et al (1976): Village Studies: Data Analysis and Bibliography. Vol.1, India, 1950-1975, Bowler Publishing Company Ltd, Essex, UK.

The full meaning of the abbreviated HEADINGS and the key to the code numbers and symbols used for each ITEM are explained fully below and the user should refer to these while working through this explanation and the examples.

The reader may use the coded statements in a number of different ways; some examples are given below:

EXAMPLE 1: In the hypothetical coded statement given above the user will see that there are three ITEMS of coded information given under the heading DEMOG, i.e. 0 2 6. From the explanatory notes below it will be seen that three separate ITEMS of information are included:

- (a) = village age/sex structure
- (b) = fertility rates
- (c) = infant and/or total mortality rates

It is clear therefore that the study has some information on all these three subjects. The precise nature of this information can be ascertained by reference to the Coding Scheme used for all three ITEMS, i.e. S.C.S. 3:

- 0 = quantitative data for aggregate
- 2 = quantitative data for aggregate and groups
- 6 = quantitative data for groups

The coded statement indicates therefore that for item (a) village age-structure, there are some quantitative data for the whole village: for item (b) fertility rates, there are quantitative data for the whole village in aggregate and for some groups within the village, and that for item (c) infant and/or general mortality rates there are quantitative data for a group (or groups) within the village comprising less than the total village population.

EXAMPLE 2: Here we assume that the reader has found one (or more) village studies which may be of particular interest for his research purposes, for example, a village in the Delta area of Andhra Pradesh, (see 0071); the main interest is in socio-economic stratification and the incomes of the poor; it would be useful to obtain some information on the distribution of land holdings and wage rates paid, and the reader wishes to know whether there are also quantitative data on these subjects in the village study in question.

To find the likely location of information on land distribution, refer to the description of the logic of the ordering of boxes outlined above. The appropriate information will most likely be found within the groups of BOXES 'M-L RT' to 'IRRG 2'. From a scan of the ITEMS under these headings it is clear that information on the distribution of operated holdings is given under 'LAND 1' ITEM (b). The code scheme applicable to that item is 'Standard Coding Scheme 3' (S.C.S. 3). Referring then to the description of the Standard Coding Scheme 3'. It is obvious that various forms of quantitative data could have been coded.

Actually coded in BOX 'LAND 1' ITEM (b) is the number 0 for our chosen village 0071, which according to the Standard Coding System indicates quantitative data for the village aggregate. It is clear therefore that there are data likely to be useful for our purposes. The process of finding out about the availability of data on wage rates is similar. The following steps are necessary:

- i. : identify from the description of BOX HEADINGS the precise BOX HEADING and ITEM required: i.e. 'LABOUR' (b)
- ii. : check the Coding Scheme for that ITEM; i.e. S.C.S.3;
- iii. : identify from the Coding Scheme the code numbers indicating the type of data required; (in this case, Code 0, or, even better, Codes 2 or 3):
- iv. : compare desired codes with those given under the HEADING 'LABOUR', ITEM (b) in the coded statement for village 0071 (Code 2 is given).

EXAMPLE 3: The user may approach the coded section differently, using it, for example, to identify all villages with given characteristics for which other information is desired. Assume that our interest lies in the effect of a regular bus service on the take-up by villagers of urban jobs; for simplicity we will confine investigations to the State of Gujarat. We wish to identify firstly villages, which have a bus service and secondly, the sub-set of the later for which information is available on occupational patterns. The first step is to see whether our primary sorting criteria (presence of a bus service) has been specifically indexed and included in the Topics Index. A quick check of all likely headings (e.g., buses, transport, and communications) shows that it is not; the villages with public transport facilities must be identified by an eye-scan. The following steps are then taken:

- i. : identify the appropriate HEADING and ITEM, i.e. TRANSPORT (b) = motorised public transport.
- ii. : refer to the Coding Scheme used for that ITEM (S.C.S.1) for the code number indicating the presence in the village of motorised public transport i.e. the number 1;
- iii. : scan all the coded statements for Gujarat (nos.0231-0297) for villages having code no.1 under the HEADING 'TRNSPT', ITEM (b). The following village studies are relevant: 0232-7, 0239-45, 0247, 0249, 0253, 0264, 0276, 0278-9, 0280, 0283, 0285-7, 0296-7.
- iv. : Then identify, in the same way described in example 2 the location and type of information on occupational patterns. Assume that code numbers 0,2, or 3 are required for ITEM (a) under the HEADING 'OCCP S' and then,
- v. : Identify from the sub-set of villages in (iii) above, those having the 'code numbers 0, 2, or 3 for ITEM (a) under the HEADING 'OCCPS' i.e 0232-3, 0235-7, 0239-43, 0247, 0249, 0264, 0276, 0278-80, 0283, 0285-7.

In this way, therefore, the Coded Statements can be scanned to identify village studies with data on any required number of the variables used.

Standard Coding Scheme

The coding schemes applicable to the ITEMS in the coded statement are explained in full in the section below 'Interpretation of HEADINGS' and ITEMS. However, three Coding Schemes have been used frequently for several ITEMS throughout the coded statement; they are the Standard Coding Schemes abbreviated here and below to S.C.S.1; S.C.S.2; and S.C.S.3.

S.C.S.1

Information coded under this scheme relates to the presence in or near the village of specified public institutions or facilities (e.g. main roads, co-operative etc.) and whether the villagers used them 'significantly'. The village boundaries used for this category are generally defined on administrative criteria; failing those, accepted customary definitions are used. An example of every facility or institution may of course always be found somewhere outside the village; the concern in this coding is to indicate only when such facilities/institutions are used to such an extent by the villagers that it may be said that their general life styles are influenced. For example the fact that two village boys were attending a high school in a distant town would not have been coded, but the fact that 10 percent of village teenagers attended a secondary school in a nearby town would have been coded. Four symbols have been used for this Coding Scheme:

1. Facility/Institution is present within the village
2. Facility/Institution is present outside the village and used significantly by the villagers.
- * Facility/Institution is absent
- No Information

S.C.S.2

Items coded under this scheme refer to the availability of certain kinds of information of a very general nature about the village or the village population as a whole e.g. means of transport, kinship, inheritance practices, climate, or health and medical practices. Such information is, where given, almost always presented in a non-quantified form. A very generous definition has been used of the concept of data 'being available'; for example, a short paragraph, which states that village political institutions are dominated by a particular faction or caste is considered sufficient to be coded "data available" on "political relationships". It is recognised that such a generous conception of data available will not be found helpful by all users. The alternatives were (a) to adopt a more rigid definition which would have resulted in 'burying' the brief piece of information which can so often prove useful, or (b) to classify data by some measure of 'detail' or 'extent' – this proved unworkable. Only 2 symbols are used:

1. Data are available
2. Data are not available

S.C.S.3

Items coded under this scheme relate to the availability of certain kinds of information, mostly of a demographic/economic/land use nature, for which we might expect both to find significant differences among the households/individuals comprising a village population and to find information on these differences in village study reports. For example, included under this heading are indications of the type of data available in the reports on mortality rates, patterns of labour use, ownership of livestock etc. Information is classified by type as well as by availability. There are two dimensions along which 'type of information is classified.

The first is whether data are presented, wholly or partly in quantitative form, or whether only non-quantified data are available. The term 'quantitative' includes both varying scales of measurement (simple numbers, weight, area, monetary value, time, etc.) and varying forms statistical presentation (totals, ratios, average, frequencies etc.).

The second dimension is the classes) of the village population to which the data refer. Two (of a very large possible number) of classes are used: 'aggregate and 'groups'. Each concept requires some explanation.

'Aggregate' refers to the largest possible group (within the context of the village population), to which the data could by definition refer. This is to often the total village population. For example, information on mortality or on food intakes is necessarily of this type. In other cases, the concept applies, by definition, to only part of the village population: under the item entitled 'Wages/conditions of employed labour' we could by definition find data relating only to that section of the village population which works for wages; information on the 'average wage rate for all labourers' would be entered as 'aggregate' data. Similarly, information on 'Use of Irrigation' can logically refer only to that section of the population, which operates land. Information coded as 'aggregate' may take one of three forms:

- (a) a general statement, quantitative or non quantitative, relating to the whole of the relevant population (e.g. the total death rate is X; the average proportion of irrigated land per farmer is Y);
- (b) a series of statements about each of a number of sub-categories which collectively constitute the aggregate (e.g. average daily per capita food intake for men is A, for women is B, and for children is C);
- (c) a series of statements about each of all the individual units (persons or households) which constitute the aggregate (e.g. total income of each village household). Information relating to a sample of the total population is coded as 'aggregate' only if it is felt that the sample is of a reasonable size and correctly taken.

The term 'Groups' refers to some sub-category of the relevant 'Aggregate'. Data are coded as available for 'Groups' whether they refer to only one 'Group' or to all defined 'Groups'. 'Groups' are commonly defined according to one of the following criteria: sex, age, social status, size of farm owned or operated. In fact, most of the quantitative data coded under Groups' in this volume, especially under items relating to agriculture and the

economy, indicate the presence of information for all 'groups' defined according to criteria of occupation or farm size.

Nine symbols are used for items coded under this scheme:

- 0 Quantitative data available for Aggregate only.
- 1. Non-quantitative data available for Aggregate only.
- 2. Quantitative data available for both Aggregate and Groups.
- 3. Quantitative data available for Aggregate and non-quantitative data for Groups.
- 4. Non-quantitative data available for Aggregate and quantitative data for Groups.
- 5. Non-quantitative data available for both Aggregate and Groups.
- 6. Quantitative data available for Groups only.
- 7. Non-quantitative data available for Groups only.
- No information

Interpretation of the Headings and items

The abbreviated HEADINGS used in the coded statements are explained below. Under each of these HEADINGS, two or three numerical ITEMS are given. The first number is classed as Item (a) in the sections below, the second number as Item (b) and the third, where included, as Item (c). For several ITEMS reference must be made to the three Standing Coding Schemes described above. Some further explanatory notes are given at the end of the section.

Two symbols have been used throughout for all ITEMS in addition to those listed below. They are:

- : no information is given
- * : the phenomenon in question is absent.

ORIENT – Orientation of the Village Study

Item (a) The primary orientation of the written report as indicated by the substantive content and analytical focus.

- 01 = General Socio-Economic
- 02 = Social Anthropology
- 03 = Social Structure
- 04 = Political Structure
- 05 = Agriculture and Land Use
- 06 = Employment/Labour Utilisation
- 07 = Migration
- 08 = Land Tenure/Labour Reform
- 09 = Irrigation

- 10 = Income/Expenditure/Credit
- 11 = Marketing
- 12 = Agricultural Extension
- 13 = Diffusion/Communication
- 14 = Education
- 15 = Decision-making
- 16 = Attitudes/Psychology
- 17 = Demography
- 18 = Electrification
- 19 = Food Consumption
- 20 = Nutritional Status
- 21 = Health
- 25 = Cooperatives
- 16 = Family Planning
- 22 = Others

Item (b) The secondary orientation. Codes as for (a) above.

STDY T – Types of Study

Item (a) Primary methodological approach

- 1 = Re-survey – village has previously been studied
- 2 = Re-survey, where the first survey was conducted by the same person(s) organisation and the results of the first survey are to be found only in this re-survey report.
- 3 = Longitudinal – the village has been studied continuously or over more than two spans of time during a period of years.
- 4 = Comparative – the research explicitly compares more than one village.
- 5 = Historical = the history of the village is a major focus of the research

Item (a) Secondary methodological approach. Codes as for (a)

METHOD – Fieldwork method of data collection

- 1 = (Structured) Questionnaire
- 2 = Observation
- 3 = Written records
- 4 = Measurement/Weighment
- 5 = Mapping
- 6 = Key Informant
- 7 = Food Measurement/Weighment
- 8 = Anthropometric observations (for health data)
- 9 = Clinical observations (for health data)

Item (b) Secondary method, Codes as for (a) above

Item (c) Other methods Codes as for (a) above

DATA

Item (a) Main form in which data are presented in the report

- 1 = Mainly quantitative
- 2 = Mainly non-quantitative
- 3 = Both quantitative and non-quantitative

Item (b) The population sample from which the data are primarily derived

- 01 = All households/individuals¹
- 02 = All adults
- 03 = All men
- 04 = All women
- 05 = All children
- 06 = All of some other groups smaller than the total village population
- 07 = Random sample of all households/individuals
- 08 = Random sample of all adults
- 09 = Random sample of all men
- 10 = Random sample of all women
- 11 = Random sample of all children
- 12 = Random sample of some other group smaller than the total village population
- 13 = Stratified sample of all households/individuals
- 14 = Stratified sample of all adults
- 15 = Stratified sample of all men
- 16 = Stratified sample of all women
- 17 = Stratified sample of all children
- 18 = Stratified sample of some other group smaller than the total village population
- 19 = Other sample

Item (c) Reliability of the data?²

- 1 = Good
- 2 = Fairly good
- 3 = Fair
- 4 = Data probably not very reliable
- 5 = Assessment Impossible

FLD YR – Year (s) of fieldwork

Item (a) The first calendar year during which fieldwork was undertaken³

- | | | | |
|------------------|-----------|-----------|-------------------------------|
| 01 = Before 1970 | 08 = 1981 | 15 = 1988 | 22 = 1995 |
| 02 = 1970-75 | 09 = 1982 | 16 = 1989 | 23 = 1996 |
| 03 = 1976 | 10 = 1983 | 17 = 1990 | 24 = none [for item (b) only] |
| 04 = 1977 | 11 = 1984 | 18 = 1991 | 25 = no data |
| 05 = 1978 | 12 = 1985 | 19 = 1992 | |
| 06 = 1979 | 13 = 1986 | 20 = 1993 | |
| 07 = 1980 | 14 = 1987 | 21 = 1994 | |

Item (b) The second calendar year during which fieldwork was undertaken or two calendar years, to the last calendar year in which it was undertaken.

Codes as for (a) above.

FLDWRK – Resources invested in fieldwork

Item (a) The period of time during which main data collection took place

- 1 = Less than one month
- 2 = Between one and three months
- 3 = Between three and six months
- 4 = More than six months

Item (b) The number of field workers engaged in data collection⁴

- 1 = one 5 = Five
- 2 = Two 6 = Six
- 3 = Three 7 = Seven or more
- 4 = Four

Item (c) Whether or not field staff was largely resident in the village during the period of fieldwork

- 1 = Resident
- 2 = Non-resident

MAPS

Item (a) Map of the village residential area (a)⁵

Item (b) Map of village fields

For coding details see S.C.S.2

VL POP – Village Population size and settlement pattern

Item (a) Size class of village population

- 0 = 0 to 100 5 = 1,001 to 1,500
- 1 = 101-250 6 = 1,502 to 2,000
- 2 = 251-500 7 = 2,001 to 3,000
- 3 = 501-750 8 = 3,001 or more
- 4 = 751 - 1000

Item (b) Village Settlement Pattern⁶

- 1 = Nucleated: all houses are grouped together
- 2 = Semi-nucleated: at least 50 % of houses are nucleated, the rest dispersed
- 3 = Nucleated with hamlets: at least 50 % of the houses are in one cluster, with most of the remainder in one or more smaller cluster(s)
- 4 = Multi-cellular: houses are grouped in two or more clusters, each comprising less than 50% of the total
- 5 = Dispersed: more than 50 % of the houses are scattered.

Town – Information on the nearest town⁷

Item (a) Distance (in km) of the village from the nearest town⁸

0	=	0	-	2
1	=	2.1	-	5.0
2	=	5.1	-	10.0
3	=	10.1	-	20.0
4	=	20.1	-	30.0
5	=	30.1	-	50.0
6	=	50.1	-	70.0
7	=	70.1	-	100.0
8	=	100+		

Item (b) Population of nearest town⁹

0	=	0-5,000
1	=	5,001 - 10,000
3	=	15,001 - 25,000
4	=	25,001 - 50,000
5	=	50,001 - 100,000
6	=	100,001 - 250,000
7	=	250,001 - 500,000
8	=	500,001+

RD RL – Road and rail communications

Item (a) Distance (in km.)¹⁰ of village (centre) from the nearest main road

0	=	0	-	0.49 (i.e. road is in the village)
1	=	0.5	-	1.0
2	=	1.1	-	3.0
3	=	3.1	-	6.0
4	=	6.1	-	10.0
5	=	10.1	-	15.0
6	=	15.1	-	30.0
7	=	30.1	-	50.0
8	=	50.1+		

Item (b) Distance (in km.) of village (centre) from the nearest railway station/halt

0	=	0	-	0.49 (i.e. station/halt in the village)
1	=	0.5	-	2.0
2	=	2.1	-	6.0
3	=	6.1	-	12.0
4	=	12.1	-	25.0
5	=	25.1	-	50.0
6	=	50.1	-	75.0
7	=	75.1	-	100.0
8	=	100.1+		

Item (c) Presence in the village of metalled road^{1 1}
For Coding details see S.C.S.1

TRANSPT – Transport Facilities

Item (a) Mean of conveyance used by villagers
For coding details see S.C.S.1

Item (b) Motorised public^{1 2} transport
For coding details see S.C.S.1

COMM – Commercial Institutions

Item (a) Retail^{1 3} outlets

Item (b) Credit Institutions^{1 4} (excluding co-operative credit institutions. Which are treated separately)

For Coding details see S.C.S.1

RNFLL – Rainfall

Item (a) Average annual rainfall (in cm.)^{1 5}

1 = 10 20 = 200
2 = 20 21 = 210+
3 = 30
4 = 40 etc.

Item (b) Degree of seasonal concentration of rainfall: the percentage of average annual rainfall falling in those months in which rainfall exceeds the simple monthly average i.e. annual average 16^{1 6}

12

1 = 40%
2 = 50%
3 = 60%
4 = 70%
5 = 80%
6 = 90%
7 = 100%

Item (c) Availability of information on rainfall for consecutive years

1 = Monthly rainfall for 8+ years
2 = Annual rainfall only for 8+ years
3 = Monthly for 6 or 7 years
4 = Annual rainfall only for 6 or 7 years
5 = Monthly rainfall for 4 or 5 years
6 = Annual rainfall only for 4 or 5 years

TERRN – Terrain

Item (a) Primary feature of the terrain of the village and its immediate locality

- 1 = High altitude (2,000+ metres above sea level)
- 2 = Mountains
- 3 = Hilly
- 4 = Undulating/sloping
- 5 = Plain
- 6 = Plateau
- 7 = Valley
- 8 = Forested
- 9 = On river bank
- 10 = On coast/lake shore
- 11 = Flood-plain/river delta
- 12 = Arid
- 13 = Swamp/waterlogged whole or part of the year
- 14 = Bush
- 15 = Parkland, (i.e. light tree covering)
- 16 = Grass land
- 19 = Rocky/broken
- 20 = Eroded
- 21 = Prone to flooding

Item (b) Secondary feature, codes as for (a) above

SOIL

Item (a) Relative fertility of the village soil¹⁷

- 1 = Obviously fertile/good
- 2 = Obviously infertile/poor
- 3 = Intermediate

Item (b) Technical data on soil type/structure/composition¹⁸

For Coding details see S.C.S.2

M-L RT – Man-Land ratios (hectares of village land¹⁹ per head of village population)²⁰

Item (a) Total village land

- 0 = 0 - 0.20
- 1 = 0.21 - 0.40
- 2 = 0.41 - 0.60
- 3 = 0.61 - 0.80
- 4 = 0.81 - 1.00
- 5 = 1.01 - 1.25
- 6 = 1.26 - 1.50
- 7 = 1.51 - 2.00
- 8 = 2.01+

Item (b) Net cropped²¹ village land. Codes as for (a) above

Item(c) Gross cropped village land.

Codes as for (a) above

TENURE

Item (a) Prevailing system of land tenure: rights held by those who operate the land^{2 2}

- 1 = owner-operator^{2 3} system: at least 70% of the land operated by the villagers is owner-operated
- 2 = Intermediate systems: between 29% and 69% of land operated by the villagers is owner-operated
- 3 = Landlord systems: 30% or less of the land operated by villagers is owner-operated

Item (b) The most common form in which rent is paid

- 1 = Cash
- 2 = Produce^{2 4}
- 3 = Labour

Item (c) The second most common form in which rents are paid. Codes as for (b) above

LAND 1

Item (a) distribution of land owned

Item (b) Distribution of land areas operated

Item (c) Tenancy: incidence, type, rents etc.

For coding details see S.C.S.3

LAND 2

Item (a) Spatial location of cultivated plots^{2 5}

Item (b) Fragmentation of land holdings into separate plots

Item (c) Land transactions: sales, mortgages, etc.

For coding details see S.C.S.3

PRO 1 – Produce^{2 6}

Item (a) The most important commodity produced by villagers

- 1 = Wheat
- 2 = Rice
- 3 = Maize
- 4 = Millets and Sorghums
- 5 = Other Cereals (e.g. barley, oat, rye)
- 6 = Potato (Trish or white) Root crops
- 7 = Other root crops. (including cassava/manioe, yams, sweet potato, cocoyama, ginger, Excludes vegetables, e.g. carrots, beetroot)
- 8 = Vegetables (includes all leafy vegetables, gourds and related plants and all European vegetables. except pulses, i.e. the bean/pea family. Excludes potatoes)
- 9 = Groundnut (or peanut)
- 10 = Other Oil seeds
- 11 = Pulses (i.e., bean/pea family)
- 12 = Cotton

- 13 = Coffee
- 14 = Tea
- 15 = Tobacco
- 16 = Sugar cane Cash
- 17 = Jute, Flax and other plant fibres products²⁷
- 18 = Silk
- 19 = Wool
- 20 = Milk and other animal products, including hides, skins and carcasses
- 21 = Other cash crops (excluding tree crops)
- 22 = Banana/Plantain
- 23 = Olives
- 24 = Rubber
- 25 = Oil Pal,
- 26 = Coconut (and Copra)
- 27 = Cocoa
- 28 = Fruit Tree Crops
- 29 = Other Tree Crops (e.g., arecanut, casuarina, and betel. Includes those used for wood and those tapped for 'toddy', palm sugar, or similar sap products)
- 30 = Fodder crops
- 31 = Other agricultural/Forestry products
- 32 = Fish and other Sea/Lake/River products
- 33 = Manufacturing, Artisan and Mining products

Item (b) The second most important commodity produced.
Codes as for (a) above

PROD 2

Item (a) The third most important commodity produced
Item (b) The fourth most important commodity produced.
Codes as for PROD 1 (a) above

CSH PR – Cash Products

Item (a) The most important commodity sold²⁸
Item (b) The second most important commodity sold
Codes as for PROD 1 (a) above

CROPS

Item (a) Areas under different crops/cropping patterns
Item (b) Cropping calender and/or the crop rotations pursued
For coding details see S.C.S.3

AG SYS – Agricultural systems²⁹

Item (a) The dominant type of agricultural system practiced in the village

- 1 = Shifting cultivation: land is left fallow for several years between intervals of cropping
- 2 = Permanent cultivation with short fallow: most arable land is cropped at least once a year, but at least 30% of the net cropped area is left fallow throughout the (average) year.
- 3 = Permanent cultivation: nearly all land is cropped at least once a year
- 4 = Intensive cultivation: 50% or more of the net cropped at least twice a year. (i.e. the gross cropped area equals at least 150% of the net-cropped area).
- 5 = Fishing
- 6 = Animal-rearing: this is included where animals are an important source of income beyond their role as providers of manure and draft power. Animal rearing is defined to be 'important' if it is the main occupation of at least 20% of the active population or the secondary occupation of at least 50%.
- 7 = Permanent tree crops

Item (b) The second most important type of agricultural system practised in the village.
Codes as for (a) above.

CULT T – Techniques of soil cultivation

Item (a) Primary method used to till the soil

- 1 = Hoe, digging-stick, spade or other manual method
- 2 = Animal-drawn plough
- 3 = Tractor

Item (b) Secondary method used to till the soil

Codes as for (a) above

AG TEC – Features of agricultural techniques

Item (a) Mechanised devices

Item (b) draft animals

Item (c) Other aspects of techniques used

For coding details see S.C.S.3

IRRG 1 – Irrigation

Item (a) Percentage of the net cropped is of the village, which is normally irrigated, (rounded to the nearest figure)

- 2 = Some, but less than 2 ½
- 3 = 5%
- 4 = 10%
- 5 = 20%
- 6 = 30%
- 7 = 40%
- 8 = 50%

- 9 = 60%
- 10 = 70%
- 11 = 80%
- 12 = 90%
- 13 = 100%
- 14 = No precise data; probably 2 ½ - 30%
- 15 = No precise data; probably 31-70%
- 16 = No precise data; probably 71-100%

Item (b) Main source of irrigation water ³⁰

- 1 = River/stream: any natural flow, including controlled rivers
- 2 = Canal
- 3 = Wells
- 4 = Tube-well(s)
- 5 = Pond/Tank/Reservoir; Lake
- 6 = Small scale system of channelling rain-water to selected plots

Item (c) Secondary source of irrigation water

Codes as for (b) above

IRRG 2 – Irrigation

Item (a) Means of Irrigation

Item (b) Use of Irrigation facilities

For coding details see S.C.S.3

AG INP – Agricultural* inputs³¹

Item (a) Use of chemical fertilizers

Item (b) Use of manure

Item (c) Use of 'new seeds' ³²

For coding details see S.C.S.3

OUTPUT

Item (a) Farm output measured by weight or volume

Item (b) Farm output measured by monetary value

Item (c) Non farm output (quantity, volume of value)

For coding details see S.C.S.3

MARKET – Marketing of farm and/or non-farm output

Item (a) Amount of produce marketed

Item (b) Prices at which produce is sold

Item (c) Form of marketing: agency, form of contract, location of transaction, etc.

For coding details see S.C.S.3

STORE – Storage of farm and/or non-farm output

Item (a) Timing of sales/length of storage

Item (b) Storage methods

For coding details see S.C.S.3

INCOME

Item (a) Total incomes (net or gross)

Item (b) Income sources

For coding details see S.C.S.3

EXPEND - Expenditure³

Item (a) Expenditure on food

Item (b) Expenditure on non-food items

For coding details see S.C.S.3

ASSETS

Item (a) Credit (sources/uses/rates of interest)

Item (b) Possession of financial assets and/or liabilities

Item (c) Net or gross changes over time in ownership of productive assets

For coding details see S.C.S.3

GOODS – Possession of goods

Item (a) Livestock

Item (b) Other farm assets and farm implements

Item (c) Consumer durables

For coding details see S.C.S.3

LV STD – Living Standards

Item (a) House types

Item (b) Possession of radios

For coding details see S.C.S.1

DEMOG – Demography

Item (a) Village age-sex structure

Item (b) Fertility rates

Item (c) Infant and/or total mortality rates

For coding details see S.C.S.3

MIGR P – Permanent Migration^{3 4}

Item (a) Emigration from the village

Item (b) Immigration into the village

Item (c) Remittances received and/or sent by villagers

For coding details see S.C.S.3

MIGR S – Temporary and seasonal migration

Item (a) Emigration from the village

Item (b) Immigration into the village

For coding details see S.C.S.3

HSEHOLD – Characteristics of households

Item (a) Household size

Item (b) Household composition and/or structure

For coding details see S.C.S.3

OCCP S – Occupational pattern by economic sector^{3 5}

Item (a) Sectoral distribution of primary occupations^{3 6}

Item (b) Sectoral distribution of secondary occupations

For coding details see S.C.S.3

OCCP F – Occupational pattern by economic function^{3 7}

Item (a) Functional distribution of primary occupations

Item (b) Functional distribution of secondary occupations

For coding details see S.C.S.3

EMPLOY – Aspects of employment

Item (a) Employment of villagers outside the village

Item (b) Presence in the village of industrial employment^{3 8}

Item (c) Generational changes in occupational structure

For coding details see S.C.S.3

LAB TL – Use of labour time^{3 9} in all economic activities^{4 0}

Item (a) Aggregate data on the input of labour time for a full year

Item (b) Input of labour time, disaggregated by types of activity, for a full year

Item (c) Input of labour time for a period less than a year

For coding details see S.C.S.3

LAB AG – Use of labour time in agricultural^{4 1} activities

Item (a) Aggregate data on the input of labour time for a full year/agricultural year

Item (b) Input of labour time, disaggregated by types of activity, for a full year/
agricultural year

Item (c) Input of labour time for a period less than a full year/agricultural year^{4 2}

For coding details see S.C.S.3

PARTIC – Labour force participation^{4 3}

Item (a) Labour force participation

Item (b) Labour force participation rates

Item (c) Relative labour contributions of family^{4 4} and hired labour

For coding details see S.C.S.3

LABOUR

- Item (a) Communal or exchange labour practices
 - Item (b) Wages and/or conditions of hired labour
 - Item (c) Labour productivity in the performance of specific activities⁴⁵
- For coding details see S.C.S.3

SCHOOL – Availability of Schools ⁴⁶

- Item (a) Primary⁴⁷
 - Item (b) Secondary
- For coding details see S.C.S.1

EDU – Education and Literacy

- Item (a) Educational attainments of the village population and/or rates of current school Attendance⁴⁸
 - Item (b) Literacy status of the village population
- For coding details see S.C.S.3

MEDIC – Medicine

- Item (a) Health/medical practices of the villagers⁴⁹
- For coding details see S.C.S.2
- Item (b) Modern health/medical institutions⁵⁰
- For coding details see S.C.S.1

HEALTH

- Item (a) Child rearing practices
 - Item (b) Prevalence of disease/infestations
 - Item (c) Sanitary practices and conditions
- For coding details see S.C.S.1

FOOD

- Item (a) Food Consumption
 - Item (b) Food sources
 - Item (c) Nutritional status
- For coding details see S.C.S.3

LAN RL – Language and Religion

- Item (a) Language spoken by the village population⁵¹
 - 1 = Villagers speak the national language⁵²
 - 2 = Villagers do not speak the national language
- Item (b) The religion of the villagers⁵³
 - 1 = Buddhism
 - 2 = Buddhism with other religion(s)

- 3 = Christianity
- 4 = Christianity with other religion(s)
- 5 = Hinduism with other religion(s)
- 6 = Hinduism
- 7 = Islam
- 8 = Islam with other religion(s)
- 9 = Sikhism
- 10 = Sikhism with other religion(s)
- 11 = Non-major religion(s)^{5 4}
- 12 = Non-major religion(s) with Buddhism
- 13 = Non-major religion(s) with Christianity
- 14 = Non-major religion(s) with Hinduism
- 15 = Non-major religion(s) with Islam
- 16 = Non-major religion(s) with Sikhism
- 17 = Confucianism
- 18 = Confucianism with other religion(s)

ETHNOG – Ethnographic details

- Item (a) Social/groups categories
 - Item (b) Kinship system(s) and/or relations
 - Item (c) Inheritance practices
- For coding details see S.C.S.2

CUSTOM

- Item (a) Religious/mythical beliefs/practices of the villagers
 - Item (b) Religious institutions^{5 5}
- For coding details see S.C.S.1

ATTDS – Attitudes of villagers

- Item (a) Attitudes towards family planning
 - Item (b) Attitudes towards social and/or political issues
 - Item (c) Attitudes towards economic issues and/or agricultural practices
- For coding details see S.C.S.3

PLTICS – Politics

- Item (a) Intra-village political relationships
- For coding details see S.C.S.2

- Item (b) Elective political institutions^{5 6}
 - Item (c) Members of political institutions operating at the supra-village level^{5 7}
- For coding details see S.C.S.1

COOP 1 – Cooperative facilities⁵⁸

Item (a) Marketing cooperatives

Item (b) Service cooperatives⁵⁹

Item (c) Credit cooperatives

For coding details see S.C.S.1

COOP 2 – Membership and use of cooperative facilities

Item (a) Membership of cooperatives

Item (b) Use of cooperative facilities

For coding details see S.C.S.3

Explanatory Notes

1. This includes studies not based on any defined sample, but relating to the village population as a whole.
2. A subjective - and therefore very approximate - assessment of the relative overall reliability of the data contained in the report. Assessments are based on data contained in the report on fieldwork methods, on internal consistency, and in very many cases, on judgements, on the research work of various research institutions visited for his very purpose by members of the team responsible for this bibliography. A major factor affecting the assessment is the length of time during which the fieldworkers lived in the village. Reports written by the person(s) who conducted the fieldwork are in general felt to be more reliable than those in which the writer played little or no role in the fieldwork.

Note that this assessment of data reliability is independent of the clarity of the data presentation, the sophistication of the analysis and the palatability of the conclusions reaches.

- 3 This refers to the survey reported in the publication(s) annotated, i.e. in the case of re-surveys, it does not include the data of the first survey.
- 4 The presence of two persons each for half the period of fieldwork is equivalent to the full-time presence of one person.
- 5 Sketch maps are included.
- 6 It was not always possible to assign villages with complete confidence to one of the five categories enumerated.
- 7 The definition of 'town' varies widely from country to country, and sometimes within countries (See UN Demographic Yearbooks). A settlement of 2,000 persons may be a fairly large village in one area, and a town in another. We have accepted the definitions

of 'town' given in the reports. This is not as inconsistent as it may at first seem: settlements are usually designated 'towns' when they fulfil mainly urban functions (administration, trading, tertiary services in general). There is more consistency in international usage that is implied by simple comparison of minimum population sizes required for urban status.

- 8 The distance is generally measured from the outskirts rather than the town centre.
- 9 Town population is taken as that enumerated in the decennial censuses.
- 10 This refers to the actual distance travelled on the ground, and not to a national link on a map.
- 11 Main road is defined to be a well-used road, with public transport facilities, and usually connecting two major settlement centres. There is clearly potential for conflicting interpretations.
- 12 'Public' implies that villagers are in practice able to purchase transport, regardless of whether or not there is formally a public transport system.
- 13 'Retail outlets' are defined as permanent institutions (i.e. excluding hawkers) selling goods produced outside the village.
- 14 This includes all persons/institutions giving loans for profit.
- 15 Measured at the recording station nearest the village, calculated with reference to as many years as data are available, and rounder to the nearest number ending in 0.
- 16 The total is rounded to the nearest number ending in 0.
- 17 A very subjective and relative categorisation. Some weighing is given to such factors as workability, which, while not affecting fertility in a direct sense, contributes to the determination of agricultural potential.
- 18 There should be sufficient information for the soil scientist to be able to make some classification.
- 19 The total area of the village is preferably defined on administrative criteria; failing that, customarily accepted boundaries are used. In India the administrative (revenue) village nearly always corresponds meaningfully to a settlement and to the bulk of the lands owned/operated by persons living in that settlement.
- 20 'Not cropped' refers to the actual physical area, which is cropped at any time during the agricultural year. The 'gross cropped' area refers to the summation of the areas cropped in each season of the agricultural year. 'The gross cropped' area refers to the summation of the arrears cropped in each season of the agricultural year. For

example, take a village with 100 hectares of arable land divided into two areas A and B each of 50 hectares, and having two cropping seasons in the year. If area A is cropped in the first season and area B in the second season, the net cropped area is 100 hectares. If, however, half of area A is cropped again in the second season, the gross cropped area is 125 hectares.

- 21 For present purposes, the area 'cropped' includes the area sown to crops, which fail to mature. Included in both net and gross cropped areas is the area of land fallowed for a short-term; i.e. one year; land fallowed for longer periods is not included. Permanent crops (e.g. tea and similar shrubs), or crops in the ground for two or more agricultural seasons (e.g., sugar cane), are counted only once.
- 22 Land operators are the persons primarily responsible for day-to-day decision-making and management.
- 23 'Ownership' entails: (i) a claim to a portion of the usufruct legitimised by the concept of 'property rights' rather than by claims of religious or political hegemony (tithes or taxes); (ii) 'de facto' rights to control the use of land. Persons holding a mortgage over land are not treated as owners. Persons holding land nominally 'owned' by superior political authorities (the State in parts of India) are considered owners if they have the 'de facto' ability to sell and lease land. Persons occupying land under customary tenure are considered to be owners. Thus the emphasis of the concept of ownership used here is on 'de facto' control over the use and usufruct of land, and is intended primarily to distinguish 'owners' from 'tenants'.
- 24 Payment in produce typically, but not necessarily, coincides with share-cropping, i.e. payment of a fixed share of the crop.
- 25 Accurate scale maps of fields and plots qualify as quantitative data.
- 26 Included here are all goods, agricultural and non-agricultural, produced by villagers. The relative importance of different products is measured ideally by reference to the monetary values. Where data are not given on output values, relative importance is estimated by using data as exist on cropped area, yields, income sources, etc.

Commodities are coded here only if they are 'important' defined such that they must account for at least 20% of the total value of villagers' output. Thus a code (*) indicating 'phenomena absent' rarely means that no other commodities are produced at all, by simply that there are no others of 'importance'.

Goods produced by enterprises located outside the village and using the hired labour of villagers (e.g., factory-made products) are not considered here.

- 27 Products, which are usually produced on a large-scale only if destined primarily for sale.

- 28 Calculated ideally by reference to the monetary value of sales. Where there is necessary, estimation is conducted as described in note 26 above. Only commodities accounting for a least 20% of the total monetary value of all sales are included.
- 29 'Agricultural system' is used as convenient shorthand for the broader concept of 'system of biological exploitation of the environment': it includes fishing. Seven types of 'agricultural' system have been designed. The difference between them is largely a matter 1-4, which are different points on a continuous of cropping intensity. The categorisation proved, however, to be very workable, and rarely required judgement on finely balanced issue. Where two or more systems were practiced in the village, relative importance was defined by the relative contributions to total output (in monetary values).
- 30 Before being used in the field, irrigation water may pass through more than one of the listed irrigation devices, i.e., it may emanate directly from a lake, which is fed from a canal system. Where possible, both devices are coded. If lack of space dictates a choice the device ultimately of most importance (i.e. in our example, probably the canal), is coded.
- 31 Quantities, areas, values, etc.
- 32 'New seeds' indicates new strains associated with the 'green revolution'.
- 33 The concept of 'expenditure' normally includes imputed values for home-produced item of consumption.
- 34 Data refer to recent rather than historical events.
- 35 Examples of 'economic sectors' are: agriculture, dairying, sheep rearing, fishing, artisan production, services, white-collar occupations, and trading.
- 36 Occupational specialisation is unusual in the villages included in this bibliography. There are a number of ways of distinguishing primary, secondary, (and tertiary) occupations" the relative income earned, the proportion of working time spent at each, or some more subjective assessment. For bibliographical purposes once can but accept the varying definitions adopted in the original studies.
- 37 'Function' refers to relationships to the means of production: self-employed, employer, wage-labourer, share cropper, etc.
- 38 For present purposes an 'industrial' establishment is one in which at least 12 persons work in one place in manufacturing and/or processing.
- 39 Data may be presented in a variety of forms: in person-months, weeks, or days, the latter sometimes standardised in eight-hour or ten-hour days.

- 40 Housework and related activities (food processing, collection of water and firewood, preparation of dung-cakes for firing) are excluded from the category 'economic activities'.
- 41 Data coded here may sometimes relate only to crop production and processing, excluding other activities such as animal-care, repair of implements, and marketing.
- 42 The labour input into agriculture may at certain times of the year be so low that it can reasonably be excluded from consideration.
- 43 The distinction between 'participation' and 'non-participation] often has very limited meaning where family farming prevails, where much food processing is undertaken by women who are considered as not economically-active; and where climatic conditions and disease reduce the effectiveness of work undertaken. The concept is however widely used in the reports included in this bibliography, sometimes supplemented with an intermediate category of 'part-time participant' or 'helper' (as opposed to self-supporting worker').
- 44 The concept of family labour' includes all non-hired labour e.g. exchange labour.
- 45 Data coded here would take the form, for example, of average area of cereals harvested per man-day; a simple calculation of total output per man-day of work of all kinds is insufficient.
- 46 'Schools' are defined to mean all educational institutions, regardless of how, or by whom, organised, except those, which teach only, or almost entirely, religious doctrine and fail to teach literacy in the language of daily usage.
- 47 'Primary' refers to the age groups between about five and eleven years of age. Indian 'middle schools' are usually categorised as 'primary'.
- 48 School attendance is invariably lower than registration statistics imply.
- 49 This includes data on types of remedies used, relationship of practices to religious beliefs, use of medical facilities, etc.
- 50 This broad category, covering nutrition advisers and midwives as well as doctors and nurses, refers to practitioners using 'modern' 'western' concepts/training/drugs; it is intended specifically to exclude 'traditional' practitioners.
- 51 The language habitually used by the majority of the population.
- 52 The 'national language' is defined as the language of the bulk of the population and of administration in the relevant polity; in the Indian case the polity is the individual state.

Intelligible dialects of the national language are treated as part of the national language. The aim of this categorisation is the identification of linguistic and ethnic minorities.

- 53 It was occasionally difficult to decide how to classify minority religions (e.g. tribal animism, Christianity) deeply influenced by Hinduism.
- 54 For the purpose of this bibliography the category 'non-major religions' includes all religions except those named (i.e., Buddhism, Christianity, Hinduism, Islam, Sikhism and Confucianism).
- 55 'Institutions' is defined broadly to include human religious functionaries and places of worship or religious veneration.
- 56 This refers only to institutions formally representing all the population (and therefore elected by adults) or all village households (and therefore elected by household heads usually adult males).
- 57 These institutions may be representative bodies, formal political parties, or other institutions, which play a primarily political role, e.g. many youth movements.
- 58 This includes only permanent institutions with some formally defined structure.
- 59 i.e., co-operatives supplying inputs for farmers (fertiliser, seed) or raw material for persons engaged in processing (e.g., coir for coir weavers).

ANNEXURE – 2

Annotated Index to Census Villages, 1961

Chengalpattu

1. Ayyangarkulam (Monograph No.1). Five miles from Kancheepuram town off Kancheepuram – Vandavasi road, Kancheepura, taluk. Main village with Harijan colony. Electrified. Population 1437 in 335 HHs. Major castes: Sengunthar Mudaliar (62.2 per cent), Nattar (14.3) and Valluva Pandarams (SC) (9.8). Handloom silk weaving major source of non-agricultural employment. Tank and well irrigation. Mainly paddy cultivation. Panchayat dominated by Sangunthars.
2. Sunnambukulam (Monograph No.23). 6 ½ miles from Gummidipundi, Ponneri taluk. Adjoins Pulicat Lake. Main village and four hamlets. Electrified. Population 2331 in 532 HHs. Major castes: Vannia Reddiars (55.0), Bharathava Chettis (10.0) and Beri Chettis (12.0). Lime sell collection provides important source of subsidiary employment, the industry is dominated by a few Beri Chettis. No irrigation except for a few wells. Paddy, dry crops and casuarinas. Vanniars dominate in Panchayat.

South Arcot

3. Arkavadi (M.No.27). Interior village 6 miles from Manalurpet on Thiruvannamalai – Thirukoilur road, Kallakurichi taluk. Main village with Harijan colony. Not electrified. Population 728 in 150 HHs. Major castes: Vanniars (58.0), Reddiars (14.0) Parayars (SC) (14.0), Konars (6.5). Limited irrigation from wells and channel from Musukundha River. Groundnut, millets and paddy. Vanniars dominate in Panchayat.
4. Thadagam (M.No.9). Interior village 19 miles from Gingee and 3 ½ miles from nearest roadside village of Mallanpillaipetral, Gingee taluk. Linear settlement around hillock. Adjoins reserved forest. Not electrified. Population 1404 in 303 HHs. Major castes: Vannia Goundars (77.0). Oddars (9.0), Thuluva Naickers (6.0). Tank and well irrigation. Groundnut, millets, paddy. Collection of firewood from reserved forest is source of supplementary income. Vanniars dominant in Panchayat.

Salem

5. Aladipatti (M.No.13). Hill village at altitude of 2500 feet n Arunoothumali, Salem taluk. Kombur at foothills is 17 miles from Salem on Harur road. Main settlement

Source: Guhan, S. (1985): Thirty one villages of Tamil Nadu: The 1961 Census Monographs, Digest Series No. 4, Madras Institute of Development Studies, Chennai.

within walled enclosure with huts scattered among fields. Not electrified. Population 709 in 160 HHs. Mainly populated by Malayalis (ST). No irrigation. Millet cultivation. Telugu Chettiars control informal land leases.

6. Arkasanahalli (M.No.3). Interior village 6 miles from Thoppur Ghats on Madras-Calicut road, Dharmapuri taluk. Main village with 6 hamlets. Not electrified. Population 1486 in 298 HHs. Major castes: Vanniars (53.5), Okkaligas (15.3), Gollas (14.7). SC (Mainly Murasu Parayar, 12.1). Limited irrigation from wells on riverbed of Hagavathi and percolation wells. Millets and paddy. Vanniars and Okkaligas dominate in Panchayat.
7. Iswaramoorthipalayam (M.No.17). 16 miles from Attur on Attur-Rasipuram road, Rasipuram taluk. Main village and one hamlet. Electrified. Population 2351 in 535 HHs. Major castes: Vanniars, Kurumbars, Jangama Pandaram, and Kongu Vellalas. Well irrigation covers about a fourth of cultivated area. Tapioca (introduced by Kongu Vellalas) gram in garden lands as cash crop for sago industry, millets in dry lands. Weaving and stoneware pot (*kalchatti*) manufacture are subsidiary occupations. Panchayat and co-operative society dominated by Vanniars.
8. Kanakagiri (M.No.6). 12 miles from Salem on Madras-Calicut highway, Sankari taluk. Main village and 6 hamlets. Electrified. Population 1537 in 325 HHs. Main castes: Vanniar (20.6) Kongu Shanars (17.6), Kongu Goundars (17.2), Senguntha Mudaliars (14.2), SC (Pallar, Chakkiliyar, Parayar, 13.7). Limited tank and well irrigation. Groundnut millets, paddy, other cash crops. Weaving and Palmyra tapping important subsidiary occupations. Kongu Goundars is the dominant landholding caste. Panchayat controlled by Vanniars, Goundars, and Sangunthars.
9. Pappanaickenpatti (M.No.22). 12 miles from Attur at foot of Periyakalrayan Hills, Attur taluk. Ten hamlets. Not electrified. Population 1787 in 353 HHs. Main communities: Malayalis (ST, 79.7), Gollas (8.1) also Muslims, Telugu Chettiars, Vanniars, and Kavara Naidus. Few wells. Predominantly millet cultivation. Malayalis are mainly engaged in transport of minor forest produce from the hills to marketing centre in the plains. Telugu Chettiars, Kavara Naidus, and Muslims control land. Malayalis is the majority in Panchayat.

Coimbatore

10. Nellithorai (M.No.23). Hill village in 11 hamlets at elevations of 1000 to 2000 feet in Nilgiris, 3½ miles to interior from Mettupalayam, Avanashi taluk. Electrified. Population 1005 in 256 HHs. Main communities: Irulars (ST, 57.1) and Okkaligas (25.8). Irrigation from Coonoor river channel and wells. Areca nut topes, paddy and millets. Areca nut topes owned by absentee owners in Coimbatore and Mettupalayam; informal leases with Okkaligas. Panchayat dominated by Okkaligas.

Nilgiris

11. Hallimoyar (M.No.20). Hill village at altitude of 1300 feet, 3 miles to interior on forest pathway from Thangumarahada, Coonoor taluk. Single settlement. Not electrified. Population 191 in 44 HHs. Main communities: Irulars (ST 69.6), Okkaligas (15.7), Panaithar (8.9), Badagas (5.8). Irrigation from jungle stream. Paddy and *kumri* cultivation of millets. Land controlled by non-tribesfolk. Badagas is dominant in panchayat.

Thanjavur

12. Kadambangudi (M.No.15). Interior village 3 miles from Solangampetti on Thanjavur-Thiruchirapalli railway line. Thanjavur taluk. Main village and 2 hamlets. Population 717 in 163 HHs. Main communities: Udayar (26.9), Kallar (21.9), Mutharajah (21.9), Padmadilar Chettiars (9.5), Christians (7.0). Grand Anicut canal main irrigation source supplemented by tank. Predominantly paddy (two crops). Some handloom cotton weaving. Udayars main landowning community and dominant in Panchayat.
13. Kunnalur (M.No.11). 1½ miles off Tiruthuraipundi-Pattukottai road, Tiruthuraipundi taluk. Main village and 2 hamlets. Not electrified. Population 1749 in 402 HHs. Main castes: Pallars (Vaikkarar, 58.4), Thevars (22.1). Irrigated by Cauvery delta. Severe drainage problems. Predominantly paddy (single crop). About two-thirds of cultivated extent under lease from Vadaranyam Devasthanam. Panchayat reflects caste composition by informal agreement.
14. Vilangulam (M.No.25). Coastal village 6 miles from Sethubabachatram, Pattukottai taluk. Main village with one hamlet. Not electrified. Population 1247 in 309 HHs. Main communities: Pallars (22.9), Christian Pallars (9.7), Thevars (22.1), Kallars (10.8). Irrigation by Grand Anicut canal and tanks. Predominantly paddy (mostly single crop). Due representation for Pallars in Panchayat.

Tiruchirapalli

15. Ariyur (M.No.31) 12½ miles from Karur, Karur taluk. Main village and 3 hamlets. Electrified. Population 1618 in 404 HHs. Main communities: Kongu Goundars (63.7) SC (mainly Chakkiliyar, 21.7). Limited well irrigation. Millets and gingelly main crops. Cotton spinning and weaving subsidiary occupations.
16. Thenbaranadu (M.No.2). Hill village in 16 hamlets located between 700 and 3200 feet in the Pachamalai, 10 miles from Uppliapuram, Musiri taluk. Not electrified. Population 1826 in 397 HHs. Exclusively inhabited by Malayalis (ST). No irrigation except from two small tanks. Predominantly millets.
17. Thiruvellarai (M.No.4). 9 miles from Srirangam off Tiruchirapalli-Thuraiyur road, Lalgudi taluk. Main village and 2 hamlets. Electrified. Population 2184 in 512 HHs. Main communities: Muthurajah (61.9), Sengunthur Mudaliar (5.8), SC (10.6). Limited

well and tank irrigation. Millets, groundnut, paddy (single crop) Diamond dressing provides subsidiary occupation. High level of tenancy. Panchayat reflects caste composition by informal understanding.

Madurai

18. Perivur (M.No.24). Hill village at elevation of 4000 feet, 9 miles to interior from Kanalikadu, Kodaikanal taluk. 20 hamlets. Not electrified. Population 2449 in 613 HHs. Main communities: Telugu Chettiars (44.6), Pulayars (ST, 33.3), Mannadiar (11.1), Coffee, Cardamom, Plantain, and citrus plantations. Mannadiars dominate in land ownership and Panchayat.
19. Sirumalai (M.No.5). Hill village at altitude of 3500 feet in Sirumalai, Dindigul taluk. 3 hamlets. Not electrified. Population 1920 in 413 HHs. Main communities: Pandya Vallalas (31.4) Baliya Naidus (17.5), SC (26.3), Pulayar (ST 4.2), Coffee, Plantain and citrus plantations.
20. Thiruvallavanallur (M.No.30). 14 miles from Madurai of Madurai-Dindigul highway. Main village with two Harijan colonies. Electrified. Population 542 in 139 HHs. Main communities: Muslims (Rowthers and Pattanians, 30.8), Pandya Vallalas (24.5), SC (33.8). Tank irrigation linked to Periyar system. Predominantly paddy (single crop). Mat weaving provides some subsidiary occupation. High level of tenancy. Vellalas is the dominant group in the Panchayat.
21. Vilpatti (M.No.5). Hill village, 5 miles from Kodaikanal town, Kodaikanal taluk. Main village and 4 hamlets. Electrified. Population 3189. Main communities: Reddiars, Pillais, Mannadiars, and Mudaliars. Potato and Plantation crops.

Ramanathapuram

22. Athangarai (M.No.12). Coastal village at statuary of Vaigai 12 miles from Ramanathapuram, Ramanathapuram taluk. Main village and one hamlet. Not electrified. Population 1721 in 357 HHs. Main communities: Muslims (37.5), Maravar (35.2), Valayar (5.5), Idayar (5.1). No irrigation. Millets. Fishing important subsidiary occupation; controlled by Muslim master fishermen. Muslims and Maravars are dominant in Panchayat.
23. Golwarpatti (M.No.25). 8 miles from Sattur, 4 ½ miles to interior from Sattur-Virudhunagar road, Sattur taluk. 10 hamlets. Electrified. Population 2013 in 501 HHs. Mainly populated Pallars (72.7) and Christian Pallars (15.2). Limited tank irrigation. Millets, paddy, cotton. Panchayat informally chosen by elders with representation to hamlets.
24. Visavanoor (M.No.14). Interior village 15 miles from Ilayankudi, Paramakudi Taluk. 8 hamlets. Not electrified. Population 3091 in 649 HHs. Main communities: Christians (61.9), Idayar (22.9), Muslims (8.1), Maravar (6.2). Limited irrigation from rain-fed tanks. Millets, paddy, some cash crops. Cooperative society and panchayat dominated by Maravars.

Tirunelveli

25. Kilakottai (M.No.21). Interior village 3 miles from Tirunelveli-Madras Road, Kovilpatti taluk. 3 hamlets. Electrified. Population 1398 in 276 HHs. Mainly populated by Pallars (44.9) and Christian Pallars (41.8) belonging to Veeranattur and Devandrakular subdivisions. Limited well irrigation. Millets and cotton. Veeranattars dominate cooperative society and panchayat.
26. Pudukulam (M.No.10). 10 miles from Tirunelveli town off Cape Comorin road, Tirunelveli taluk. 8 hamlets. Not electrified. Population 1609 in 331 HHs. Christians (mainly Nadars, 47.4) Maravar (16.9), Nadar (8.2), SC (11.8). Limited tank irrigation linked to Nanimuthar project. Paddy, cotton. Nadars are dominant in the Panchayat.
27. Ravanasamudram (M.No.7). 10 miles from Ambasamudram off Tenkasi road, Ambasamudram taluk. Single settlement. Electrified. Population 2479 in 573 HHs. Main communities: Muslims (48.5), Saiva Pillais (12.0), Brahmins (10.4). River irrigation from Ramanadhi. Mainly paddy (2 crops). Mat weaving and beedi rolling important subsidiary occupations.

Kanyakumari

28. Kadukkara (M.No.13): 10 miles from Nagercoil in valley surrounded by Vellimalai and Pothigamalai, Thoivala taluk. Linear settlement around hillock. Electrified. Population 1769 in 370 HHs. Mainly populated by Nanjilnad Vellala Pillais (80.1). Irrigated by channel linked to Perunchani dam. Paddy and coconuts. Temporary migration for estate labour.
29. Kaduthachery (M.No.16). 5 ½ miles from Nagercoil, 1½ miles to interior on Manakudi road, Agastoeswaram taluk. Single settlement. Electrified. Population 464 in 130 HHs. Mainly populated by Parayars (Sambavars 45.5) and Christian Sambavars (53.7). Irrigated by tank linked to Vadasery River. Paddy (2 crops). Large extent of absentee landownership and tenancy.
30. Kottuthal Ashamkulam (M.No.19). 6 miles from Kuzhithurai Vilavancode taluk. Main hamlet on roadside and scattered homesteads in Palmyra groves. Not electrified. Population 1406 in 229 HHs. Main communities: Nadars (66.4), Christian Nadars (22.3). Virtually no irrigation. Coconut, tapioca. Palmyra tapping and jaggery manufacture provide subsidiary occupations.
31. Kootumangalam (M.No.8). 2 miles from Kolachel, Kalkulam taluk. Houses located amidst coconut topes. Electrified. Population 703 in 117 HHs. Main communities: Krishnavagayar (56.1), Nadars (25.0). Mainly coconut groves with some paddy. Coir rope making important subsidiary occupation.
